

## EFFLUENT WATER TREATMENT PLANT

### PROJECT SUMMARY

<b>Name</b>	Effluent Water Treatment Plant
<b>Location</b>	Nye, Montana
<b>Client</b>	Sibanye Stillwater
<b>Type</b>	EPCM

### PROJECT DESCRIPTION

Nordmin Group of Companies worked closely with Sibanye Stillwater to complete the EPCM design, construction and commissioning of an effluent water treatment plant for the Stillwater Mine in Nye, Montana.

Nordmin Engineering provided the detailed design, procurement and construction specifications, site construction support, coordination of subcontractors/ suppliers and process commissioning, in conjunction with Sibanye Stillwater, to ensure quality construction services were delivered on schedule for the project.

Through the effective use of knowledge and innovative technology, Nordmin completed the automation and integration with existing processes, as well as the logic and controls design required to upgrade and expand supporting infrastructure.

The Stillwater Mine is located in the front range of the Beartooth Mountains with elevations exceeding 1,524m above mean sea level. To ensure minimal environmental impacts during the construction phase Nordmin safely assisted with construction through the harsh winter operating conditions.
