

FEASIBILITY STUDY MINE CONCENTRATOR EXPANSION

PROJECT SUMMARY

Name	Feasibility Study - Mine Concentrator Expansion
Location	Nye, Montana
Client	Sibanye Stillwater
Type	EPCM

PROJECT DESCRIPTION

Nordmin Group of Companies worked closely with Sibanye Stillwater to complete an internal mine feasibility study for the mine concentrator expansion in Nye, Montana.

Nordmin Engineering has provided the overall site model development, mass balance and flow sheets, piping and instrumentation diagrams, equipment specifications and a power system study complete with the detailed development schedules, operating and capital cost estimates.

The feasibility study completed by Nordmin for the mine concentrator expansion provided supporting front-end definition for the project. Nordmin is currently engaged to design and assist construction of this facility on an EPCM basis.
